Hi Ms. Wisniewski,

Thank you for contacting the US Environmental Protection Agency (EPA) to relate your concerns on the location of the disposal facilities for the dredged contaminated sediment from the Passaic River Restoration Project (Site).

Your e-mail below was forwarded to this Office last Wednesday (November 9) for response.

Dredging for sediments which you expressed concern will start in the spring of 2012. The contaminated sediment will be removed and piped to a processing facility that is currently under construction a quarter mile downstream from the Diamond Alkali site at 117 Blanchard Street. There, sediments will be dewatered, placed in lined containers, sealed and then transported by rail, not to Southern New Jersey, but rather to licensed disposal facilities in Utah and Oklahoma. Air and water monitoring at the work locations will ensure safe operations.

Your question suggests a high degree of knowledge about this Site. From your e-mail, you appear to be well versed on the ongoing work at this Site. Should you need additional information please visit the project's websites, [www.ourPassaic.org](http://www.ourPassaic.org) and <http://www.epa.gov/region02/superfund/npl/diamondalkali/>. From these websites you can read project overview material, read about site activities or review archived documents within the digital library.

As you will note on the website, EPA encourages public participation in the remediation process with additional meetings scheduled for December 7th and 19th. We look forward to your continued interest in this Site!

Should you have any questions, please do not hesitate to call the Community Hotline and Investigation/Response Process toll-free number for this Site (888-283-7626).

Have a nice evening,

George H. Zachos  
Accelerated Cleanup and Stabilization Manager and Regional Public Liaison (formerly Superfund Ombudsman)

COMMENTS\_OF\_REQUESTOR

Re:Passaic River Restoration Project: Your notice states that during phase one of cleanup the water will be squeezed from the contaminated sediment, treated and transported by rail to a licensed disposal facility. My question is: "Where is this disposal's facility located?". My neighbors' and I will have a problem if it is shipped to our area in extreme Southern NJ.I would greatly appreciate a response to this question. Thank you.
